373 Azaisoflavones: Synthesis, antimicrobial evaluation and binding affinity with DNA gyrase

Antimicrobial potency of azaisoflavones has been evaluated *in vitro* against nine bacterial and two fungal strains, respectively. The requisite azaisoflavones have been conveniently synthesized in three steps, with the key step being the super acid catalyzed tandem reaction. The biological results reveal that out of twelve compounds screened, three compounds (5a, 5j and 5l) exhibit comparable activities against the standard drugs and demonstrated activities at μM concentration. In addition, molecular docking reveal compound 5a as the most potent by showing a least binding energy of -5.99 kcal/mol with DNA gyrase receptor compared to other compounds.

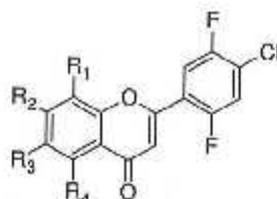

5a docked in DNA gyrase (-5.99 kcal/mol)

383 Synthesis and antimicrobial evaluations of some novel fluorinated chromones and pyrazoles

A series of novel fluorinated chromones and pyrazoles have been synthesized and screened for their antimicrobial activity (MIC).

- 391 **Characterization and antitubercular activity of synthesized pyrimidine derivatives via chalcones** of

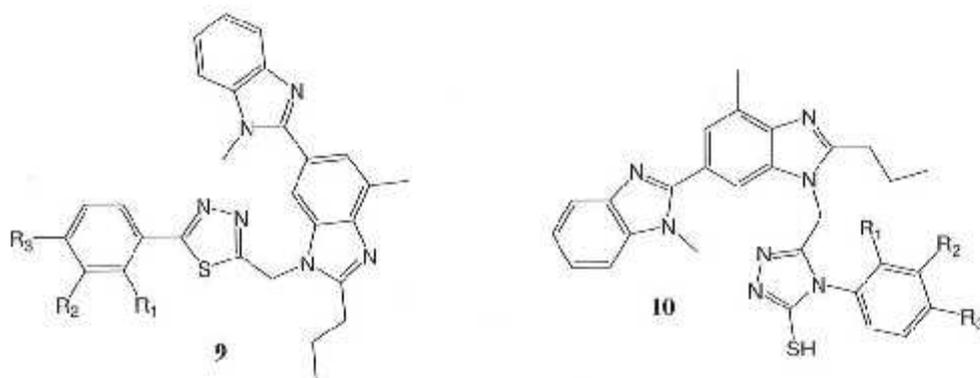

Synthesis and biological evaluation of pyrimidine derivatives containing 2-amino, 2-thio, 2-ol substituted derivatives are described. Biginelli type three component reaction between chalcone of an aldehydes and acetophenone react with guanidine, thiourea and urea to give a rapid facile pyrimidine ring.

- 406 **An efficient synthesis, characterization and anti-bacterial activity of pyrimidine bearing 1,3,4-thiadiazole derivatives**

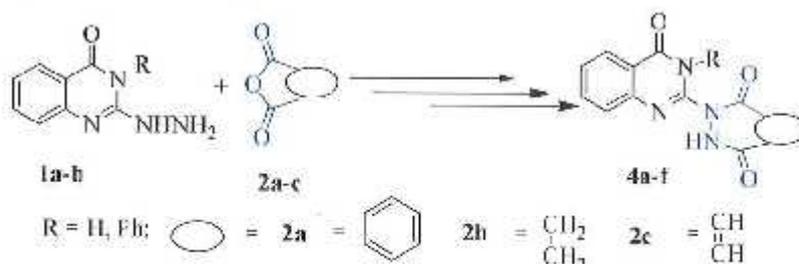

Andrews B* & Mansur Ahmed

PG and Research Department of Chemistry, Islamiah College, Vaniyambadi 635 752, India

A series of pyrimidine bearing 1,3,4-thiadiazole derivatives have been synthesized and evaluated for antibacterial activity. Most of the synthesized compounds have shown promising antibacterial activity.

- 412 **Green and efficient synthesis of 2-(4-oxo-3,4-dihydroquinazolin-2-yl)-2,3-dihydrophthalazine-1,4-dione**

Synthesis of 2-(4-oxo-3,4-dihydroquinazolin-2-yl)-2,3-dihydrophthalazine-1,4-dione have been carried out by two different methods in green solvent PEG-600.

- 418 **Rational design and synthesis of benzothiazolo-isatinis for antimicrobial and cytotoxic activities**

Benzothiazolo-isatinis **3a-p** and **5a-p** have been synthesized and evaluated for antimicrobial and cytotoxic activities. Some of the compounds **3k**, **5j** and **5o** show significant antibacterial and antifungal activities when compared with standard. The compound **3g** is found to be most significant with IC_{50} values of 154.59 μM and 261.99 μM against HeLa and HBL-100 cell lines, respectively.
