Cover Story

IEEMA timely intervention helps restoration of power supply in cyclone ravaged Odisha

Around 10 million people in Odisha were grappling with the inconvenience of disruption in power supply in the aftermath of the Cyclone Fani which ravaged the state with wind velocity at a speed of 200 KMPH on May 3, 2019. As per Government estimate, most of coastal Odisha, including the state capital Bhubaneswar have witnessed uprooting of 100,000 electricity poles. Several substations and low transmission lines have been completely damaged.

26

International Presence

Elecrama 2020 : Promotion at HANNOVER MESSE 2019

HANNOVER MESSE 2019 is important platform for all technologies related to industrial transformation and tradeshow for industrial technology. More than 215,000 trade visitors used HANNOVER MESSE to invest in new technologies and prepare their businesses for the future.

Bangladesh

Bangladesh Clean Energy Summit & Elecrama 2020 Promotion at Dhaka, Bangladesh

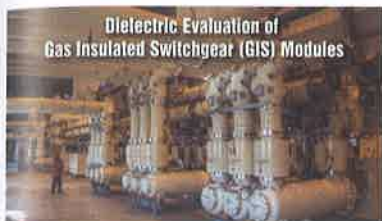

African Utility Week

IEEMA Participation in India Pavilion at African Utility Week 2019, Cape Town, 14-16 May 2019

Guest article

Dielectric Evaluation of Gas Insulated Switchgear (GIS) Modules

Gas Insulated Switchgear (GIS) offers significant advantages over conventional Air Insulated Switchgear (AIS) on account of reduced space and operational efficiency. High voltage power frequency (AC) test and partial discharge (PD) test are very important routine tests for evaluation of GIS.

Opinion

Improving the Distribution efficiency by Real time Monitoring and Analysis of Transformers

India has one of the largest electrical power distribution network in the world connecting the consumer base of around 200 million having 400 GW connected load. The Power network in India distributed 1142 billion units generated in 2018-19

Condenser Bushings - Concept to Condition Monitoring

48

48

Case study

Condenser bushings – Concept to condition monitoring.

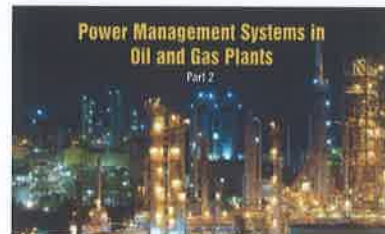

A true case history of failure of 245kV Oil impregnated paper bushing of 160 MVA Transformer and a sample realistic cost benefit analysis, emphasizing the use of online tanδ monitoring system

A brief description of on-line monitoring system highlighting its superiority over the conventional off-line monitoring practices have been depicted with a true case study and a specimen cost- benefit analysis pertaining to failure 160 MVA, 220/132/33kV Transformer due to a HV -OIP bushing failure and its-assumed down time of 72 Hrs. at a sub- station 150 Kms away from the HQ of the controlling authority of the Transmission Utility in the state of Madhya Pradesh (India).

Tech Space

Power Management Systems in Oil and Gas Plants (Part 2)

There have been instances in working plants where one generator has tripped, load shedding equivalent to the spinning reserve deficit has been effected by the PMS within 200ms (Fast load shedding), but the frequency dip has caused cascade tripping. This has prompted the customer to opt for conservative Fast Load shedding based on sudden load change. The PMS has been called upon to trip load equivalent to current load on the tripped generator minus the sudden load change available.
